COURSE SYLLABUS

Zero Trust Architecture Implementation

Take zero trust from principle to plan: assess current-state maturity, work the pillars, and leave with a staged implementation roadmap backed by governance and metrics.

Group classes (Live Online) and onsite training are available for this course. For more information, email onsite@graduateschool.edu or visit: https://www.graduateschool.edu/courses/zero-trust-architecture-implementation

Course Outline

Module 1: Zero Trust Principles and Federal Implementation Drivers

Examine zero trust principles, core tenets, and the federal policies and mandates driving adoption across government environments.

Module 2: Current-State Assessment and Zero Trust Maturity

Evaluate the current security environment and establish a maturity baseline using the CISA Zero Trust Maturity Model.

Module 3: Identity, Credential, and Access Modernization

Apply identity, credential, and access management principles as the foundation of a zero trust architecture.

Module 4: Device, Network, and Workload Trust Enforcement

Enforce trust requirements across devices, networks, workloads, and other components of the technology environment.

Module 5: Application, Data, and Policy Enforcement Architecture

Design policy enforcement mechanisms that protect applications and data based on identity, context, risk, and least-privilege access.

Module 6: Visibility, Analytics, Automation, and Threat Response

Use centralized visibility, security analytics, automation, and threat response capabilities to support continuous trust evaluation.

Module 7: Implementation Roadmaps, Governance, and Performance Metrics

Develop a phased implementation roadmap, establish governance responsibilities, and define metrics for measuring zero trust progress and performance.

Module 8: Designing a Zero Trust Implementation Plan Capstone

Produce a comprehensive zero trust implementation plan that addresses maturity, architecture, governance, priorities, milestones, and performance measures.
