Course Outline

Module 1: Requirements Analysis

- Learn how to define, organize, and verify solution requirements to ensure they meet stakeholder needs and business goals.
- Analyze stakeholder requirements to define solution capabilities.
- Specify solution requirements in sufficient detail for development.
- Prioritize, organize, and allocate requirements based on business value and constraints.
- Define assumptions and constraints that may impact solution feasibility.
- Verify and validate requirements to ensure quality and alignment with business needs.

Module 2: Solution Assessment and Validation

- Focus on evaluating proposed solutions, preparing for implementation, and measuring performance post-deployment.
- Assess proposed solutions to determine alignment with stakeholder and business requirements.
- Allocate requirements to solution components and plan phased implementation.
- Evaluate organizational readiness, including cultural and technical preparedness.
- Define transition requirements to support change from current to future state.
- Validate the implemented solution and evaluate its performance against business objectives.
