Course Outline

Module 1: Personal Property Management Basics

- Understanding the legal and regulatory basis for federal personal property management, including key legislation and regulations.
- Defining roles and responsibilities of property management stakeholders, including Property Management Officers (PMOs), Property Custodians, and Accountable Property Officers (APOs).
- Exploring different types of property such as expendable, accountable, sensitive, and capitalized property.
- Overview of the three phases of the personal property management life cycle: acquisition, accountability and control, and disposal.

Module 2: Project Management Basics

- Introduction to project management concepts and how they apply to conducting property inventories.
- Discussing key project management elements, such as planning, scope, cost, and time management.
- Understanding the importance of controlling and managing project risks, performance, and quality.
- Exploring how applying lessons learned from past inventories can improve future projects.

Module 3: Planning a Personal Property Inventory

- Defining the purpose and scope of the inventory project and identifying key stakeholders.
- Creating a comprehensive project plan, including resource estimates, scheduling, and budgeting.
- Identifying methods for eliciting stakeholder requirements and determining project scope, including the use of communication strategies and risk management planning.
- Developing a quality plan and defining success metrics for the inventory project.

Module 4: Controlling a Personal Property Inventory

- Executing the project plan and ensuring the inventory progresses according to schedule and quality standards.
- Directing the project work by managing tasks and resources, measuring quality, and communicating with stakeholders.
- Tracking performance against planned outcomes and managing risks and issues as they arise during the inventory process.
- Using project management tools such as project scheduling software to manage the inventory process efficiently.

Module 5: Managing a Personal Property Inventory

- Managing actual performance and comparing it with planned performance to ensure the project remains on track.
- Managing risks and communicating with stakeholders to keep them informed about inventory progress and any necessary adjustments.
- Understanding project scope and handling changes that may arise during the inventory process.
- Implementing change control processes to manage modifications in scope, time, or cost during the inventory project.

Module 6: Applying Lessons Learned

- Understanding the importance of applying lessons learned from previous inventories to improve future projects.
- Developing systems for capturing and sharing best practices within the organization to improve property management processes.
- Ensuring the sustainability of the lessons learned process to continue enhancing future inventory efforts and property management systems.
